

TECHNICAL SPECIFICATIONS

• Active ingredients: Citric acid

• Packaging: One (1) case = 2×2.5 gal

• Formulation Type: Liquid concentrate

• Chemical Group: N/A Biopesticide

• PHI: 0 days

• REI: When spray is dry or 4 hours

RECOMMENDATIONS FOR OPTIMAL RESULT

- Apply when conditions are susceptible to disease development according to model.
- Addition of a non-ionic surfactant (spreader) may improve the performance of the product, validate the compatibility first on a small area to confirm tolerance.
- Always read and follow label instructions

MODE OF ACTION

FungOUT has antifungal effects on conidia germination, germ tube formation and elongation, appressorium formation, hyphae branching and haustorium formation. It has a direct bactericide activity and also reduces bacterial growth and the appearance of various disease symptoms.

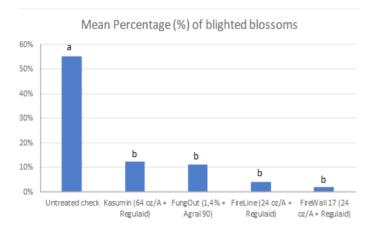

FungOUT also forms a protective barrier on the surface of the leaves that inhibit pathogen development.

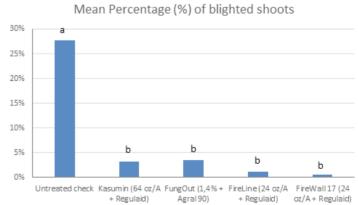

USE PATTERN

CROP	DISEASE	RATE	FOLIAR SPRAY VOLUME	APPLICATION TIMING
Apple	Fire blight (Erwinia amylovora)	1.4% v/v with a non-ionic surfactant	Use the minimum spray volume to obtain full coverage	Apply when conditions are conducive to disease development. Re-apply every 2-3 days.

RESULTS

Trial conducted by Kerik Cox in Geneva (New York), in a research orchard in 2018. Variety Gala. Comparative treatments were applied at 80% bloom and after one week. All treatments were applied 23 hrs before inoculation. FungOut was applied 22 hrs and 5 days post inoculation.

FungOUT has not been registered by the United States Environmental Protection Agency. AEF Global Inc. represents that this product qualifies for exemption from registration under the Federal Insecticide, Fungicide and Rodenticide Act. Please refer to product label for complete application details.
